Day Six
Evolution versus Man
In Our Image

Creation Theory

Author: R. Lindemann

theories being consistently spread abroad to the masses, theories which now have become socially accepted as “settled scientific fact”. His position is that when dealing with any of the sciences, accuracy is paramount to having true understanding of any topic. He states that, “People’s desire to push their own agenda, all too often overrides their accuracy and turns into a system of beliefs and denial of actual evidence, rather than accurate evaluation of the information using true science.”

He feels that true human logic is important and that it has been overridden through methods of modern indoctrination. In effort to help others navigate through the fog of misinformation and enhance their own understanding, he has gone through the process of writing many books on some of the most prominently misunderstood topics.

His current bibliography includes the books *Bending the Ruler* about astrophysics, *Dream Thin* a plain language instruction manual to understand weight loss, and his four-book *Life Corner Stone Series* which includes the books *Hot Water*, *Red Hot Marriage*, *Strong Family*, and even *Understanding Prayer* exploring the effectiveness of prayer and its effects on our bodies and whether or not prayer to a higher power is scientifically realistic. He also wrote the five-volume series called *The Science Of God* analyzing the viability of the Genesis Creation account and the Global Biblical flood. To get your own copy of these or his other books, visit RLindemann.com or search “R Lindemann” on your preferred book retailer’s website or wherever books are sold.

Author Bio

With over four decades in contract-engineering, this author has worked extended periods in several engineering fields, including chemical, electrical, and mechanical engineering, among others. This experience has offered him unique insight into key aspects of our physical and chemical world. Having also been heavily involved in the detailed data analysis that is required in various engineering fields, he was able define many core connections between physics, chemistry, our bodies, human behavior, and even how it all affects our beliefs and our decisions.

Addition Bio Info

After having extensively studied the physical sciences, he began to see irrational

Sample Interview Questions

For additional discussion points, see the detailed Table Of Contents following this page.

- 1.) Of all of the possible topics in the Bible, what made you write an entire **5-Volume** series called “***The Science Of God***” exploring the ins and outs of the Bible’s Genesis One Creation Account?
- 2.) What do you see as the key field of study regarding the Bible’s Creation account?
- 3.) What is your general take on human evolution?
- 4.) How deeply have you studied human evolution?
- 5.) Do you discuss Darwin’s work in ***The Science Of God Volume 4***?
- 6.) Have you studied all of Darwin’s work?
- 7.) Should the Biblical Creation account be taught in school as it pertains to human evolution?
- 8.) How well is Biblical Creation presented as taught in schools or other venues?
- 9.) In ***Volume 4*** of ***The Science Of God*** do you elaborate on what constitutes “Life”?
- 10.) What are your thoughts on aborting a “fetus”?
- 11.) Does it really matter if someone believes in Evolution versus Biblical Creation?
- 12.) What do you want people walk away with regarding *Evolution* versus *Creation* after reading ***The Science Of God Volume 4***?

Introduction

In our “scientific” world, we are faced with a deluge of “compelling” scientific data. If you have gone to public school, you will have had more than your share of exposure to some of this data, but often in a somewhat indirect manner. The subtle indoctrination regarding evolution being true, and the Bible’s Creation account being false, is really quite overwhelming when you look into that aspect of modern education. And when it comes to the arrival of mankind on Earth, we end up splitting hairs and misinterpreting a lot of information regardless of which perspective, religious or scientific, we are viewing the information from.

From an evolutionary science perspective, nothing really matters, and ultimately there are no rules or guidelines. However, from a Biblical Creation perspective, “man” is the pinnacle of Creation, and if man or animals could interbreed with other kinds it would pervert their kind. The desire for our own kind that is in good physical form is a protection for humanity against selecting a path that will lead to the perversion of the ultimate design of man. So long as men and women always seek women and men that they are attracted to, the world will stay diverse and humans will remain pure and prolific. If this could ever be breached, then humans will have tainted their origins and will no longer be pure and in harmony with the Creator’s original design.

There is much about this subject that the world is not prepared to hear and will reject. Some of the myths of old have some basis in truth, and we have been misled into believing that certain crossbred animals never existed. We fail to believe what

ancient writings state and is sometimes witnessed in the fossil record. We continue to embrace the erred evolution view that disregards all things that do not abide by the rules of evolutionism whose mantra is, “Throw out all evidence that does not support the theory”. Doing so is dishonest and is a lie. When we fail to properly analyze the presented evidence, we then each have deceived our own selves.

From a Biblical perspective, we were Created unique from other kinds of beings, namely animals. And to violate that is a “sin”, which is to say that it is void of the desire of God the Creator. That point is very important for all of us to understand. If a Creator does in fact exist, we are ultimately judging ourselves by our choices, possibly resulting in separating ourselves from this alleged Creator. If you buy into the Creation argument or the evolution argument, you then have made the choice as to what you believe. Did you get that? **You** have made the choice. And here is an important point: It may very well be that neither of these two standard belief sets are correct. This means that it is possible that no matter which choice you make, you might be wrong and ultimately be liable for your error—especially if you misguide others using that error.

As you read on, try to remove all biases and read from a fresh perspective, and then analyze the information that you read and see how it compares to what you may have thought before reading this book. Will the information that you read in this book reconcile with science? Will it reconcile with the Bible? And, will it reconcile with reality? You be the judge as you read on and consider the points presented in this volume of *The Science of God*. It is important to note that in this book when the term “man” is used it is typically referring to what we call “mankind” rather than “man” or “woman”.

Chapter 1

Conceived in Our Image

The question everybody wants to know or prove is: Are humans “Created”, or did we “evolve”? That question has been plaguing mankind for hundreds of years, and more than likely, it has been asked for thousands of years through most of recorded human history. Most people are seeking actual answers to the question rather than the petty arguments and name calling we all too often hear. When we’re passionate about our beliefs and are frustrated because we are unable to answer all of the questions we’re asked, that’s typically when voices are raised and mockery ensues, but all to no resolution to our actual questions. Are **you** willing to hear other people’s thoughts on the matter? Or is your mind closed and it is a settled point of “inarguable fact” in your mind?

Since we are discussing Creation in this book, we must to first make the assumption that a Creator exists and analyze that and then dissect parts of Genesis One to see if it is scientifically viable that a “God” Created mankind, or if Genesis One from “The Bible is nothing more than mere fairytales”. But let’s not

Chapter 2

"I Think Therefore I Am"

I would like to dive directly into the question of mankind having been Created, but since mankind is allegedly "Created" it quickly brings to the table the question of—Who or what exactly was it that caused mankind to be? However, first we need to understand that there is really no such thing as man-*kind*, but rather, it is simply to be stated as "man", but more on that later. Now, since Creating is an intellectual activity, we must dispose of the "*what*" and focus on the "*who*". When pondering these origins topics, whether it be questioning how we came to be, or how the Universe came to be, I like to take people back to the very beginning—back even further than Genesis chapter one verse one.

Ask yourself this: No matter how things came to be, how did it get there? Let's say that everything did come from a "big bang" which theoretically started as a point so infinitely small that it would be scientifically undetectable, we still have to ask how it got there. Size is a relative aspect of existence, so it does not matter how big or how infinitely small something is, *it* still is there. So if your position is big bang, then ask yourself: How did

Chapter 3

Man - The Higher Creation

Can we prove that God actually exists by exploring the evolution-versus-Creation topic? I do believe that any rational mind can do so, but only if we suspend all judgment and make the assumption that a Creator truly exists and then ponder that Creator from that perspective, rather than assuming that there is no Creator as the starting point to prove that a Creator exists. In doing so you should arrive at the conclusion that the Creator is extremely logical and fair and wants only what is good for the Created creatures. And it is this general Creative nature of the Creator that has been instilled into “man”.

The basic subject of this book is the arrival of “man”. Man can reason through how a self-Created Creator might have come to be, but how did things get from a self-Created Creator to “man”? How did something come from nothing? We can logically suggest a self-Created Creator because conscious is not made from any substance or thing—it just exists. Once conscious began to exist with **I Am**, it is just there and is non-scientifically-tangible in its existence. But how do we get from a non-tangible conscious, all

Chapter 4

A Way to Perfection

As discussed in *The Science Of God Volume 3 - Day Five and Day Six - The creatures - Revolution or Evolution*, the probability of some sort of adaptive evolution most likely occurred in the other creatures over the many years since the initial Creation events occurred, but with Adamah we do not see any deviation. I understand that there is an army of evolutionists that will argue this, but there are **no** transitional forms leading to man that cannot be either clearly placed squarely in the “primate” category or clearly placed in the “man” category without having to distort reality to a considerable degree. Setting aside any thought of evolution for the moment and analyzing only the Genesis One text, we have to realize that “man” was the last of Creation. Based upon our nature, when we create things we typically seek to achieve perfection of our creation as we conclude our creative process.

It is common for creative people to make those finishing touches to their work. Where is this common obsession from? In the context of Biblical Creation, I would have to attribute it to

Chapter 5

The Breath of Life

Whether or not either side of the debate will consider the controversial views put forth in this book is unknown, but we should at least expect that neither side can tear it down like both other perspectives can so easily be torn to shreds. So for the sake of continuing the line of thought presented in this book, we will now evaluate Adamah's, or Adam's, becoming.

Not Believing Anything

Over the years in discussing the various Creation topics, I have heard on numerous occasions where evolution proponents will say that they “only accept facts and don't just believe things other people say”. But of course this is absurd, because if you read a book and see the pictures and accept their account as “evidence”, then you are believing what the author of that book said. So unless you're actually out there digging in archeological digs or actually studying biology by doing microscopic biology experiments, you are typically believing what you have heard or read—This is an inescapable truth. But it is not so much the

Chapter 6

Woman - The Perfect Companion

After God Breathed the Breath of Life in to Adamah, a few other events occurred, and then God took note of the fact that Adamah was alone. God then decided to Create a companion for Adamah. All of the animals already had their male or female counterparts, but not so with “man”. God needed to make a perfect companion for Adamah. Now, since the earth-slime method of bringing forth appears to have offered a vast and diverse variety of creatures within each kind, it is possible that God wanted Adamah’s companion to be made in the image of Adamah. The **I Am** is a unique being with no other known similar being to exist, and since the **I Am** is the only one, it stands to reason that, unlike in the case of the animals, God only made one version of Adamah. But how could God the **I Am** make an identical creature like man for man?

A Pristine World

There are many people who make God out to be some make-believe hocus-pocus POOF-like God who waves a magic wand

Chapter 7

Multiply by Dividing

Adamah and Eve were commanded to begin to propagate when God said: “increase and multiply, and fill the earth, and subdue it, and rule over the fishes...”etc. Multiplying by dividing are essential functions of life, without which we, that is to say mankind or more appropriately “man”, would no longer exist. Before they could multiply, they had to come together and be joined to make one flesh. We can assume at this point in the Creation text that God was done Creating creatures and from this point forward the creatures would all have to self-propagate or their kind would have perished.

Now, if we take the text at its word from an authoritatively translated Bible, we must take the text for what it says, and with a pinch of common sense, we can evaluate the way nature works and compare that with the Creation text in order to get a logical and realistic picture of what likely occurred. Since the text did not mention “kind” when Creating man, we are going to make an assumption that is consistent with what we see in nature today. “Man” has very little deviation from the original design, and any

Chapter 8

Forming the Vessel

Most people are too busy living their lives to study these sorts of things, so books like this are written to consolidate the information and weed out the garbage in effort to deliver the concise details needed to easily understand the topic. What most people tend to not notice is that it is the livelihood for most of the people in the evolution industry who deliver much of the information to you about this topic, and they make their money by constant informational updates typically in the form of books and “documentaries”. There is nothing wrong with doing that, this book is similar in that way, but when the interest in the subject drops off, then a new more-fantastical book will be written with ever increasingly outrageous claims. And again, we should have no problem with this, until they attempt to delegitimize other books such as the Bible, thus causing people to turn away from the **I Am**.

As the various theories and deviations of those theories evolve faster than the evolution that they profess, they are formed into a mindset that fills the heads of unsuspecting youth with what

Chapter 9

Preserving Creation for the Long-Term

One of the longest and ongoing debates is the evolution-versus-Creation debate, and as mentioned in a previous section, that debate continues partly due to the misunderstanding of words and definitions. When you study the fossils and remains of the many creatures that have been found, what you find is largely what you see today in nature regarding animal forms, with the exception of obvious extinctions, such as dinosaurs. The layers of rock and dirt that have entombed the various forms have in many ways cleared up questions, but have also caused many new questions. If we found no deviation whatsoever from the skeletal structures in modern creatures, then full-scope evolution itself would be entirely extinct. However, since we do find minor amount of deviation and also find many enormous sized extinct creatures, it does lend somewhat to the idea of full-scope evolution.

The fossils and other remains of creatures from eons past are a true gift for researchers or anyone else who has an inquiring mind. Without this history buried safely beneath our feet, we

Chapter 10

What We Are Committed To

Most people are more concerned with proving their point than they are with revealing truth. We commit to our errors with an astonishing level of voracity, unyielding in our quest to show others just how “right” we are. Our conviction and blind-faithed beliefs on matters such as a Creator versus evolution provoke much passion within us. And it is that passion that far too many onlookers respond to by interpreting someone’s passion to be truth, but often it is not anywhere near truth. Typically, it’s not that we are lying to them; rather it is that often we are simply incorrect in our own assessment of the data that we are then sharing.

Don't Be Fooled

Passions on the evolution side of this debate run so deep that many very detailed “documentaries” are made and books are written in effort to convince the unsuspecting public that the evolutionary theories are “settled fact”. This even goes so far as to have artists do renderings of what the creatures that previously

Chapter 11

A Seed of an Idea

Seeds make the world go round. Without seeds *nothing* could propagate “after its kind” as is explicitly stated so eloquently in the Bible’s Creation text. No one on either side of the debate can argue that very simple fact. All seed material has the instruction-set for the particular “kind” variation. This undeniable fact is clearly stated in the Bible and is true in the evolution theory as well; however, in evolution it has no boundaries of a Biblically stated “kind”. Evolution states that anything can morph into what would over millions of years end up being a completely different “kind”, and in there is the core-overreach of evolution.

But seeds are more than physical constructs that propagate all living things. Seeds are also laid out in ideas. The basic premise here is that all seeds, whether they are physical seeds that will propagate life, or ideas seeds that will propagate thought, all contain vast amounts of *information*. And all information comes from thought. If you receive idea-seeds from someone, those idea-seeds will typically grow in your mind when you water them with ponderance. Hundreds of years ago someone pondered the

Chapter 12

Guided by the Layers

All around the world there is a great deal of evidence regarding evolution and the limits thereof trapped within the many layers of sediment. We find this evidence in bits and pieces as man traverses the Earth and excavates and builds. As we find these historical treasures, we strive to unearth them to reveal the facts. Then we take those facts and analyze them and present our own analysis as if that analysis is the actual found artifacts, which it is not.

It is a fact that we found something and that its structure matches that of a bird or a man or some other creature, and that's about all we really know about the actual artifacts. Any statements beyond that are pure speculation. The sedimentary layers reveal a great deal about Earth's history, but those layers have been contaminated in our minds by our own inaccurate reading of the actual found data. There is more information about the layers in *The Science Of God Volume 5 - Boats, Floods, and Noah - The Deluge*.

Chapter 24

Final Analysis

In the final analysis of the evolution-versus-Creation debate, we find that there are two levels on each side. Evolution has *macro* and *micro* and Creation has *six-twenty-four-four-day* and *long-age*. Long age Creation is often improperly used in an attempt to make the Bible reconcile with macro-evolution so that they can hold onto their God **and** their science. But long-age Creation has absolutely nothing to do with evolution. Could it? Possibly, but it is unlikely. For all of the reasons mentioned in this book, macro-evolution is obviously false. But what about six-twenty-four-four-day Creation, is it a possibility? No, it is not a possibility. If we choose to believe in the idea of Creation, then we also have to believe in a Creator who Created it all. And to make the assumption that a Creator who so brilliantly and proudly Created “light” is going to cheat the Creation of light itself to get light to us sooner than it could on its own from so far away by defying the Creation itself, is utterly illogical! And to further believe that the Creator would POOF! creatures into existence defies everything we see in nature and thus is also utterly illogical.
